

Progress Report **April 15 2021**

Estimated site completion: ~77%

Refer to April 14 report. Not much was accomplished today.

Changes added:

- As recommended by Material Design Lite, Added the
- Added UNIQUE Constraints and set up FOREIGN KEYS in the Database.
- Considered using DEFAULT UUID_SHORT() instead of AutoIncrement Int as Primary key, but decided not to implement it.
- Added the template html to `viewPost.php` . Actual backend coding is expected to start tomorrow.

The current focus of development is `profile.php` . It was decided that the forms for editing profile information is to be split into three forms - Edit Profile Picture and Banner, Edit Bio, and Edit Account Details. This made `profile.php` more complex than originally planned.

The website will be considered 100% completed when:

- Profile.php is fully completed (including the editProfile setup and backend)
- View Post and Comment system is fully implemented
- The feature of viewing liked posts is finished, or integrated as a part of `profile.php`

The admin controls for the website is not a planned feature. But it can be implemented as a Java CLI Application, separate from this project.
